Follow the steps below to embed Behance designs on your WordPress website.

How to Collect Behance Design’s Embed URL?

Go to the **Behance website**, open the project you want to embed and copy the page URL from your browser’s address bar.

You can also get the URL by tapping the ‘**Share**’ button available at the right on a source screen. It will then open a ‘**Share Project**’ pop-up from which you can copy the link.

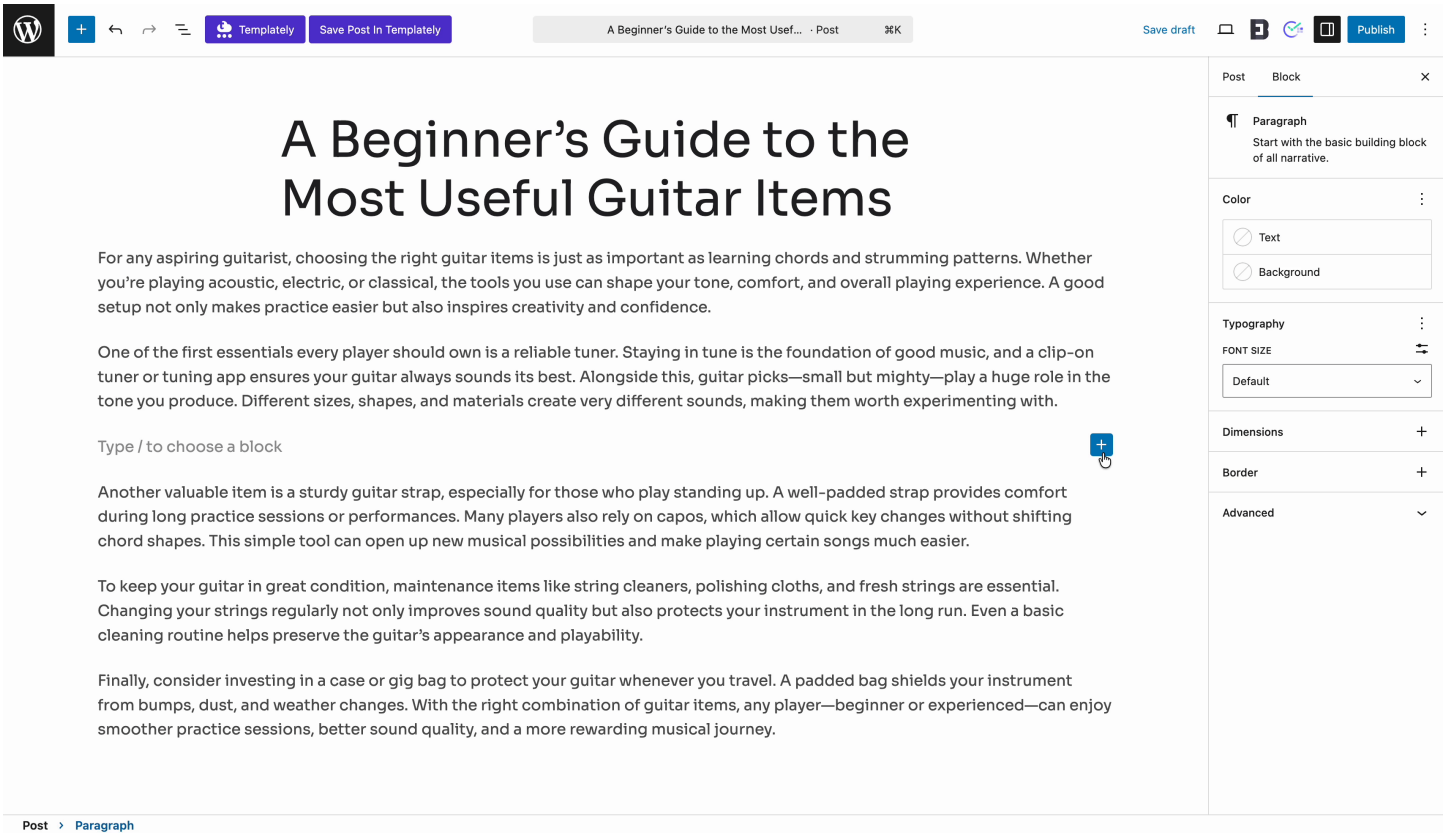

Embed Behance Designs Using Gutenberg

Embedding Behance content in Gutenberg is simple and takes only a few moments. Just follow these steps below.

Step 1: Insert the EmbedPress Block in Gutenberg

Navigate to your WordPress dashboard and open the post or page where you want to embed the Behance project. Click the **‘+’** icon to add a new block, and search for **EmbedPress**.

Select the **EmbedPress** block to insert it. This is where you will input the Behance design share URL.

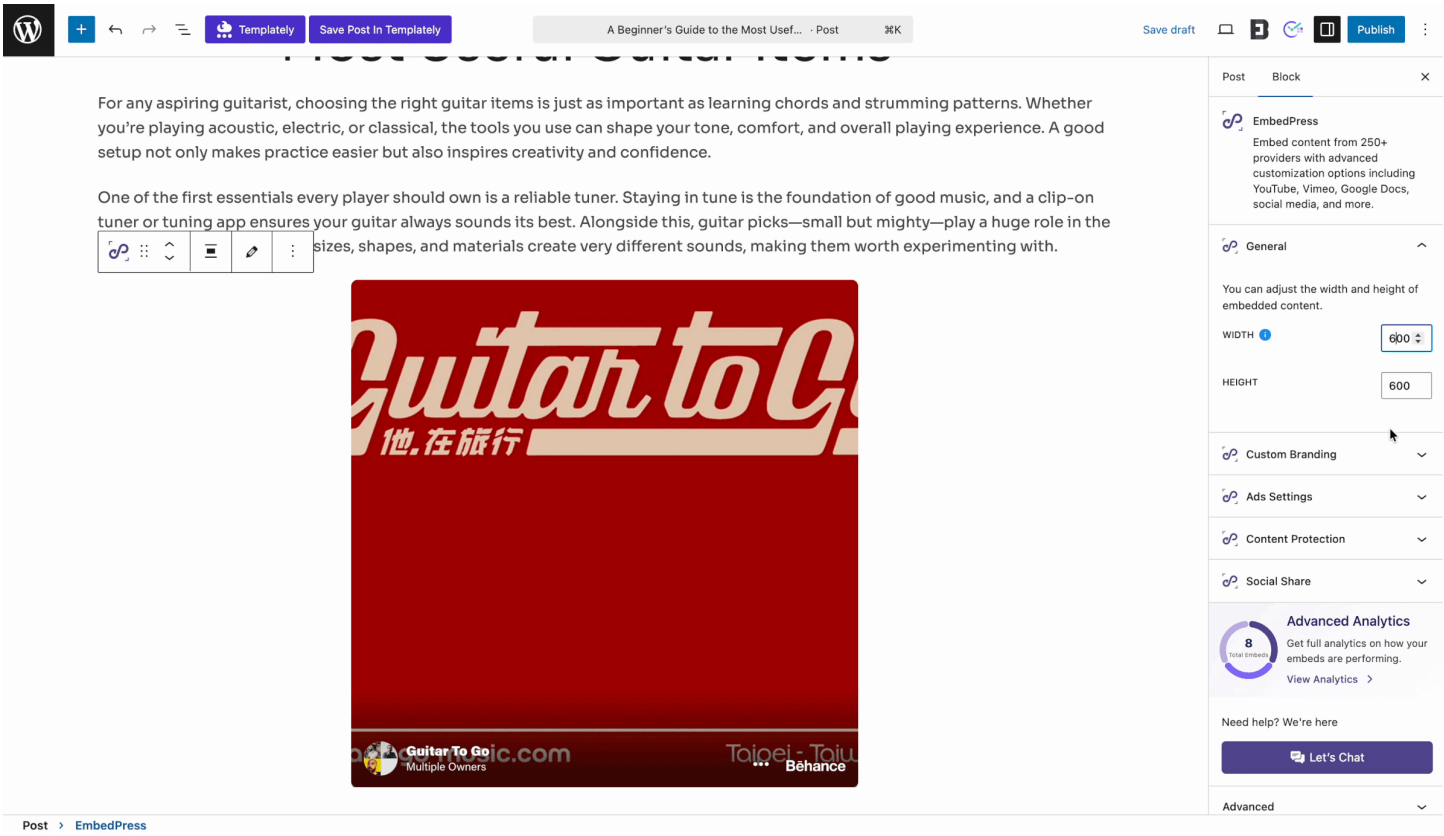

Step 2: Paste the Behance Link

Once the EmbedPress block is added, you will see an input field. Paste your Behance project URL there. The design will automatically load and preview inside the Gutenberg editor.

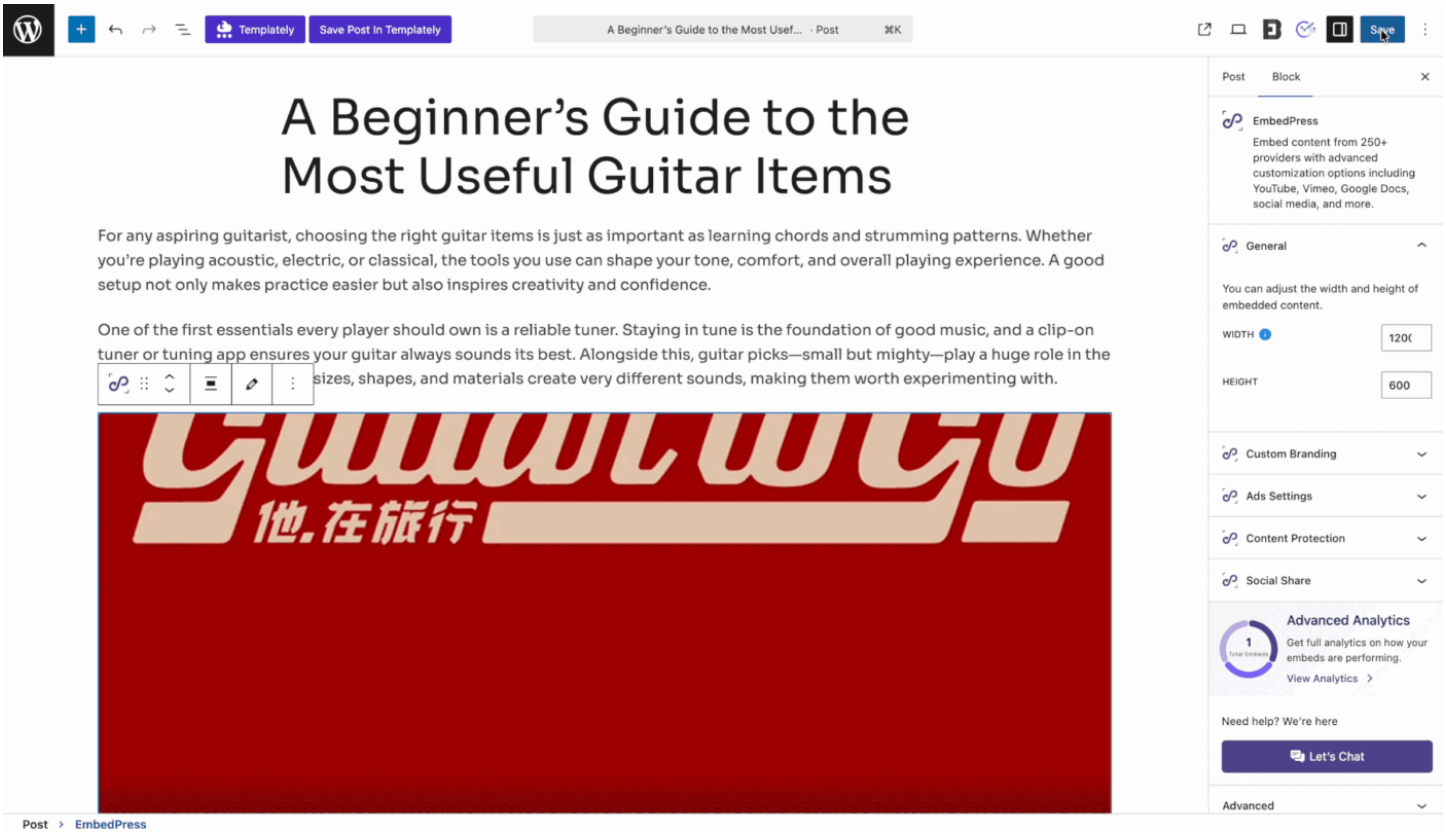

Step 3: Customize Your Embedded Content

Once the embedding is done, you can adjust its height and width to match your page size. This will ensure your embedded content gets a perfect fit to your web page.

Step 4: Publish or Update Your Page

If the preview looks good, hit '**Publish'** or '**Update'** to make the embedded Behance design live on your website.

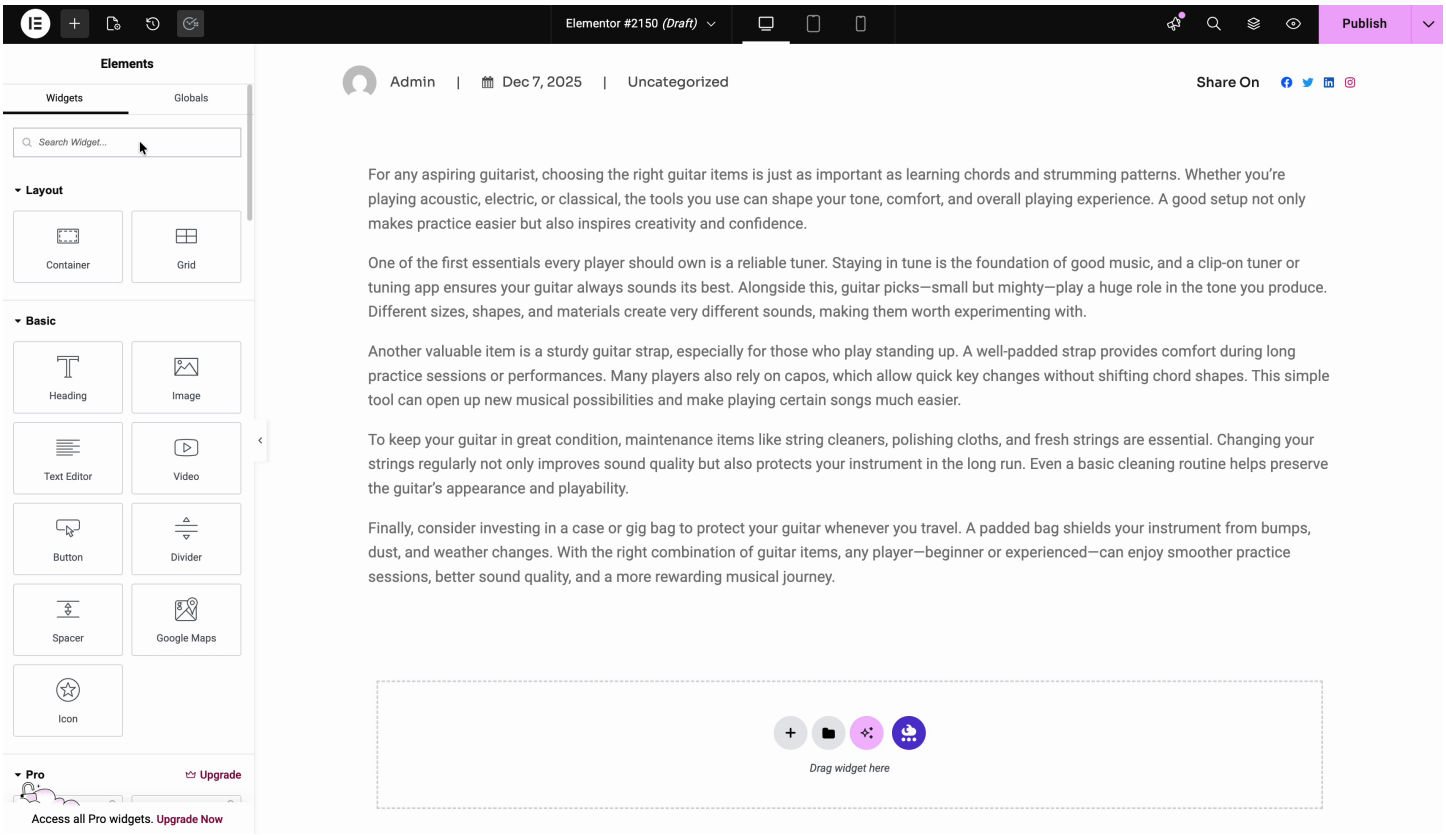

Embed Behance Designs Using Elementor

You can also embed Behance in **Elementor** using the EmbedPress widget. Follow the step-by-step process to know how.

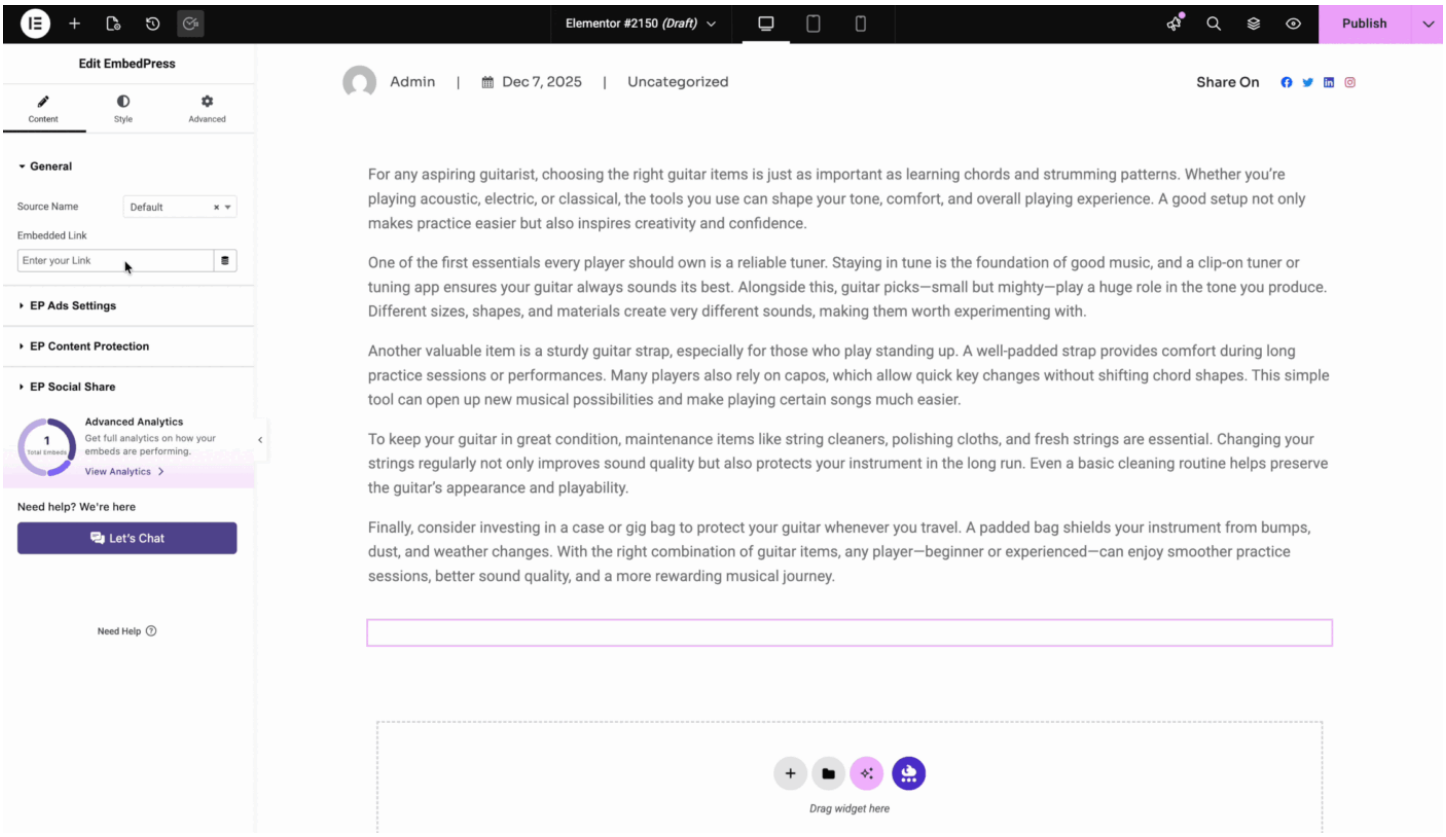

Step 1: Add the EmbedPress Widget

Edit your page with Elementor. From the left widget panel, search for **EmbedPress** and drag the widget onto your page.

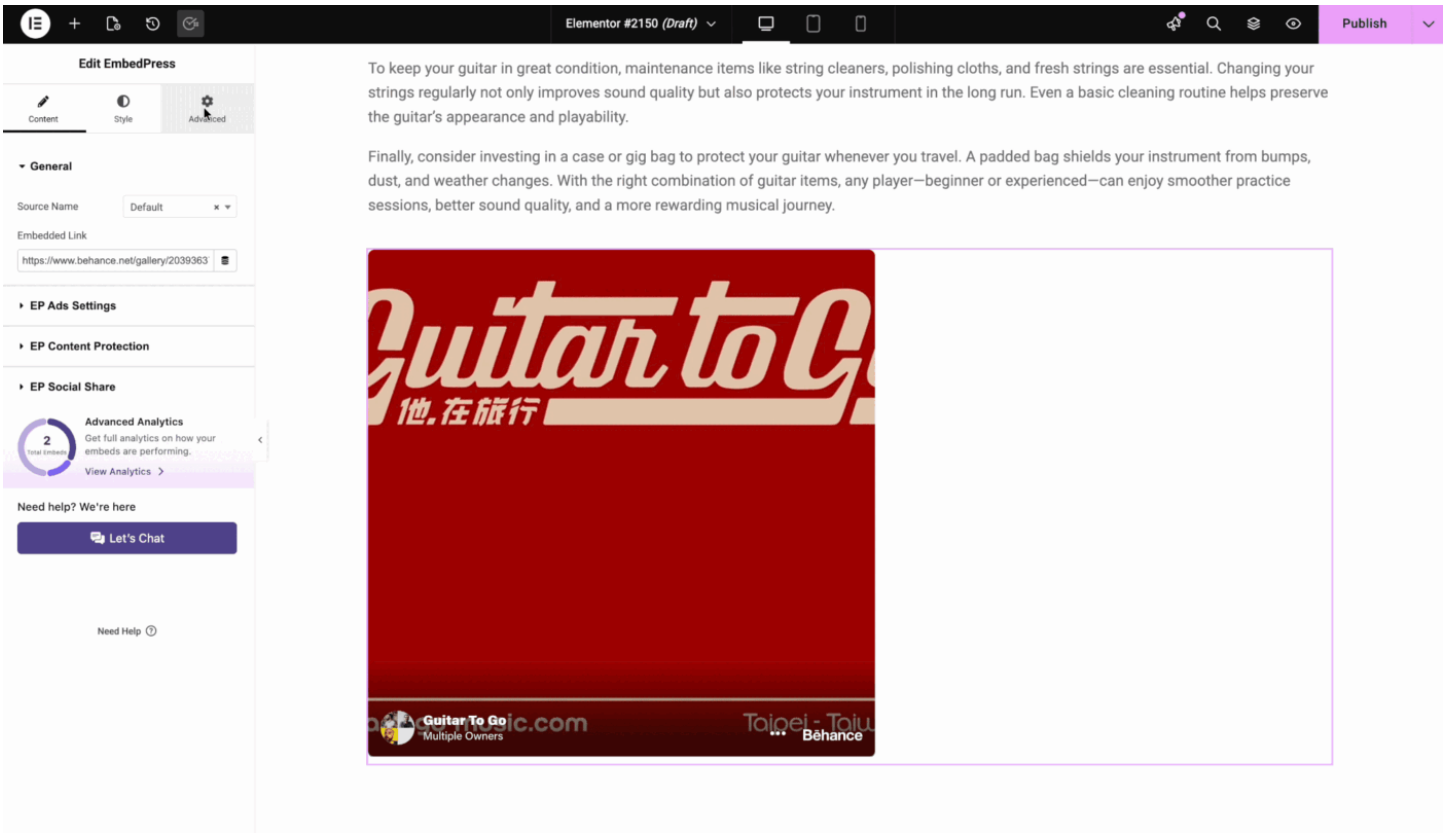

Step 2: Paste the Behance URL

Under the widget's **Content** settings, paste your Behance project link into the URL field. The Behance design will instantly appear in the Elementor preview window.

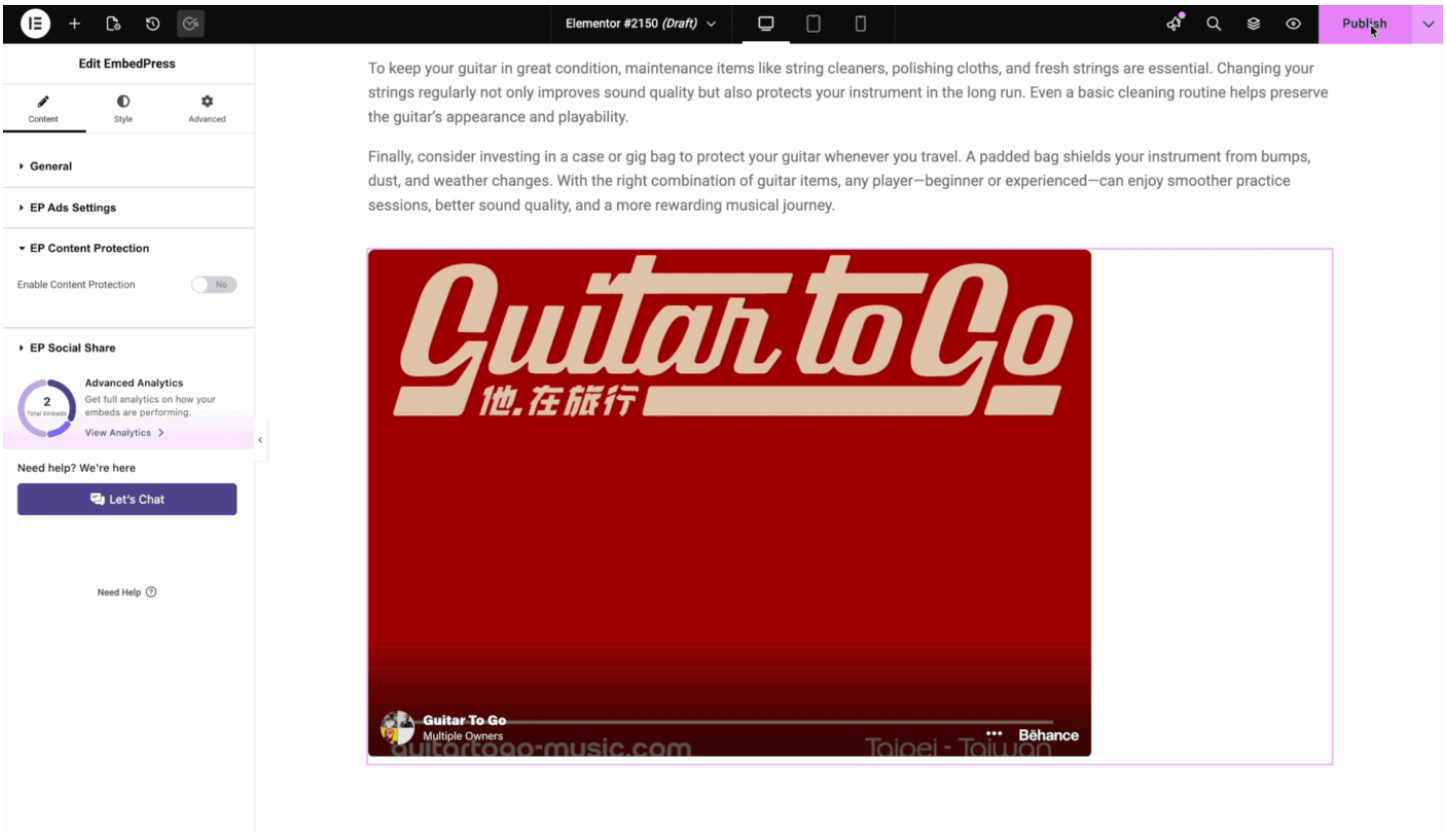

Step 3: Customize Your Embedded Content

Once the embedding is done, you can adjust its height and width to match your page size from the **Style tab**.

Step 4: Publish Your Elementor Page

If everything looks perfect, click '**Publish'** to make your embedded Behance content visible on the frontend.

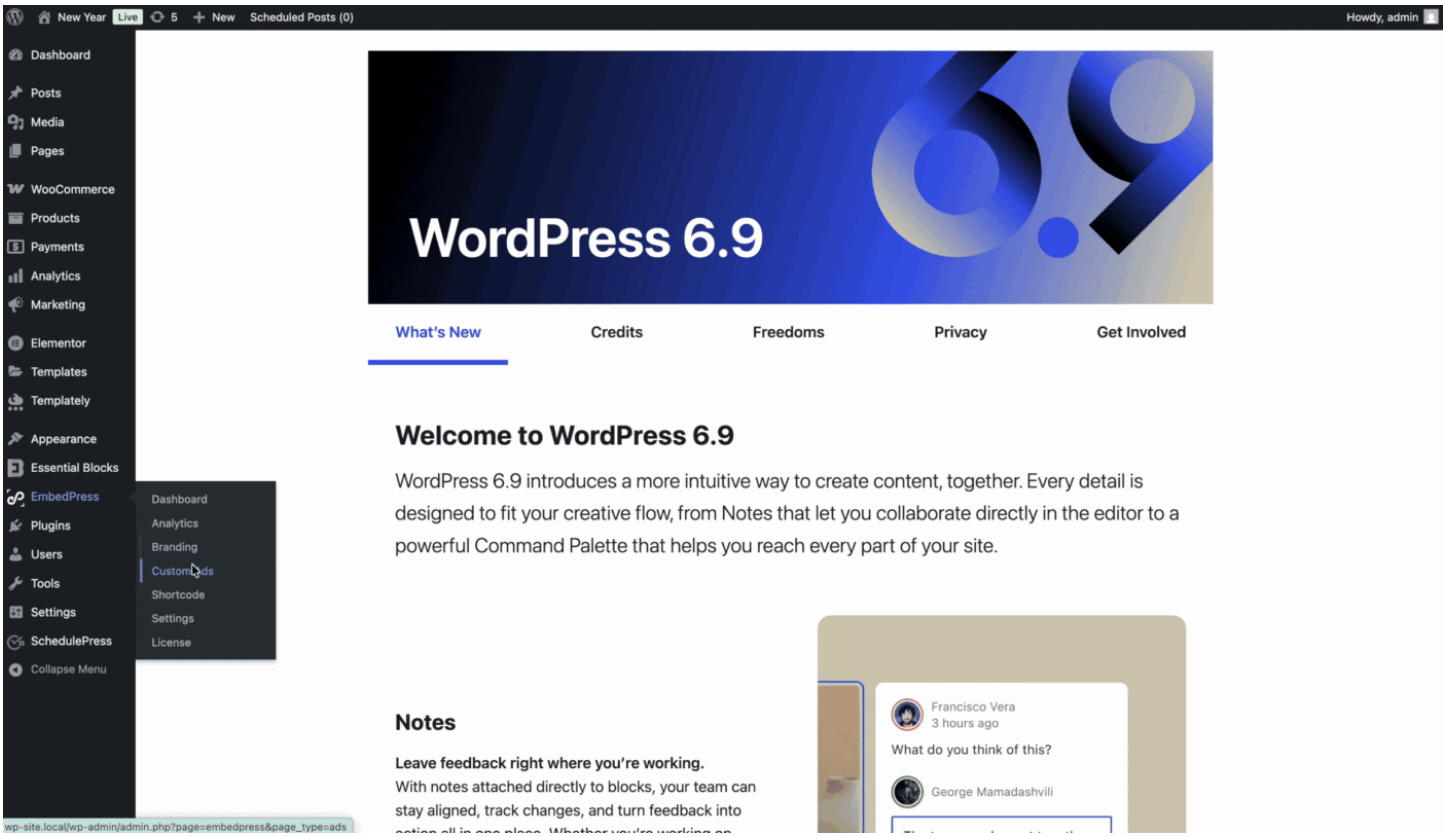

Embed Behance Content Using Classic Editor

EmbedPress allows you to embed Behance content with your classic editor as well, using the **shortcode**. Follow the steps to learn how you can embed Behance using a classic editor.

Step 1: Generate EmbedPress Shortcode

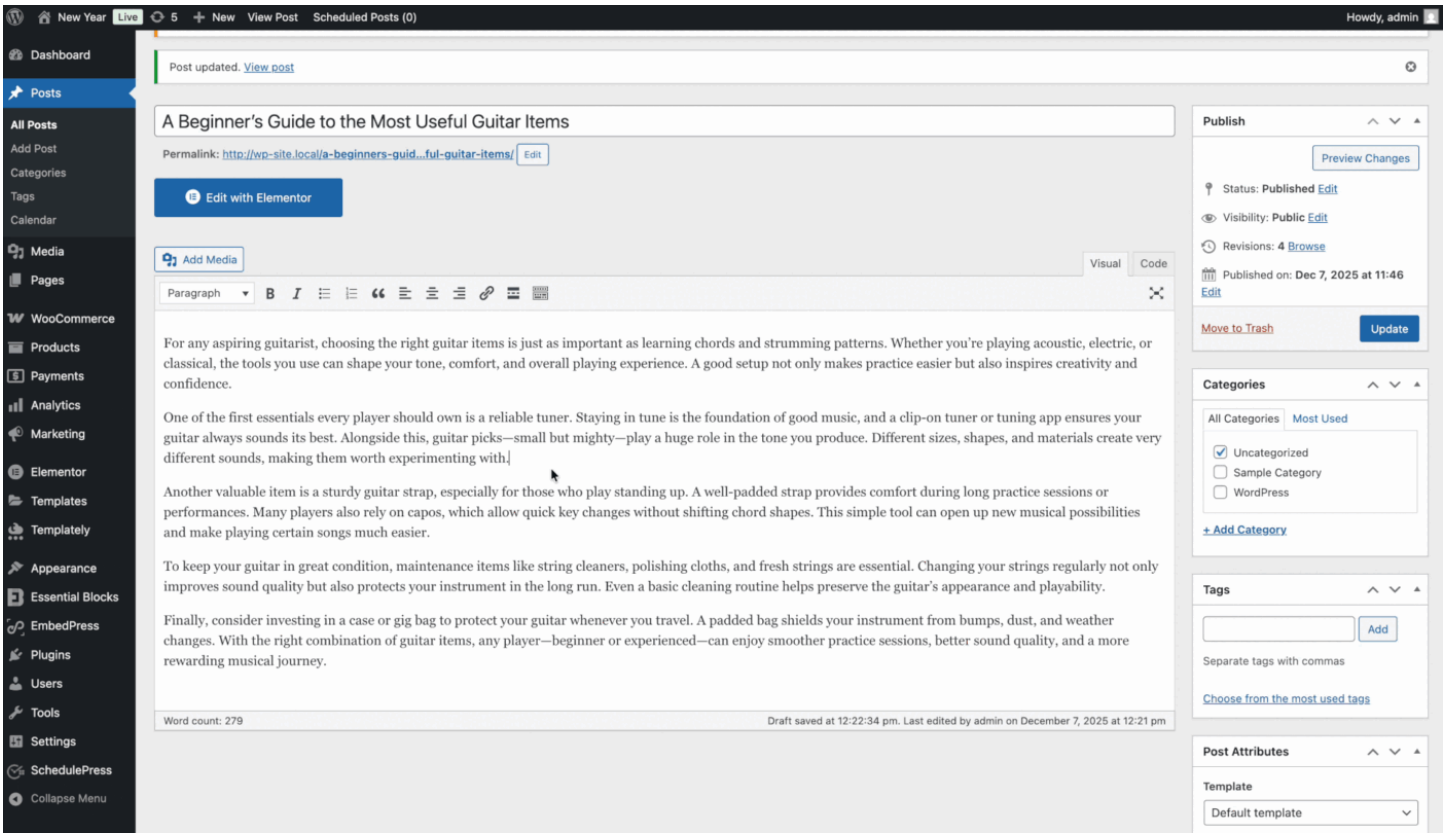

Go to your EmbedPress plugin dashboard and click on the **'Shortcode'** option, as shown below. From there, you can access the tools for generating custom shortcodes and embed them in any WordPress editor.

Then paste the collected content URL in the input field and click on the '**Generate**' button. EmbedPress will automatically generate a shortcode of the source content. Click on '**Copy Link**,' and you will be ready to embed it in any WordPress page builder.

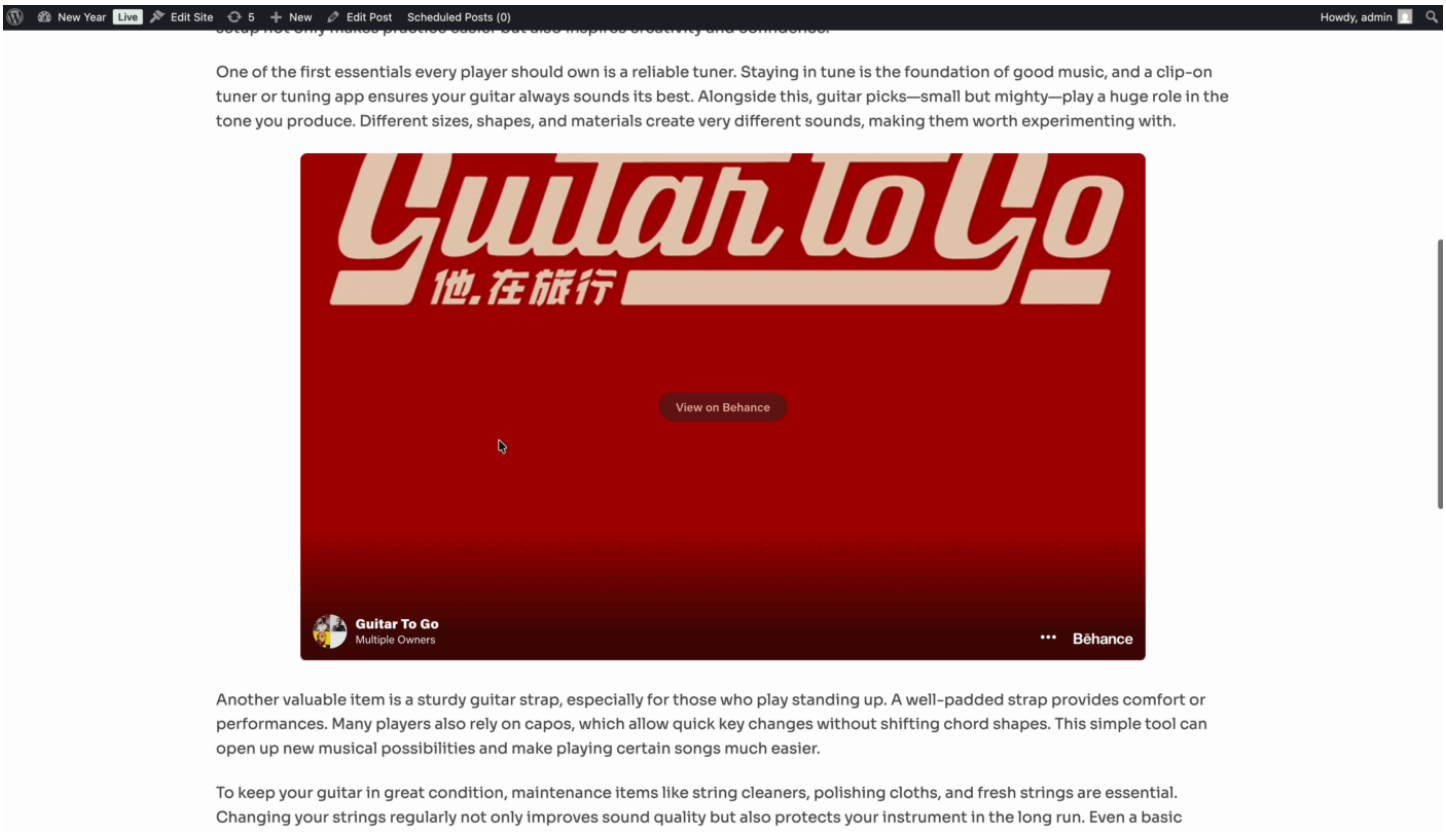

Step 2: Embed with Shortcodes on WordPress Editors

Open up your preferred posts or pages on WordPress Classic Editor. Add your Behance design URL to the content area. And instantly, your URL will be transformed into an embed of your Behance design.

Final Outcome

Finally, click on the **'Publish'** or '**Update**' button and view the page to see the content that you have embedded on your site.

This is how easily you can display your Behance design using Elementor, Gutenberg or Classic editor.
